

Mobile App Wireframing – Expense Tracker

STUDENT DETAILS

Name: Manoj

Project Title: Expense Tracker Mobile Application

Tool Used: Figma

Type: Low-Fidelity Wireframe

Introduction

This project focuses on designing low-fidelity wireframes for an Expense Tracker mobile application. The purpose of these wireframes is to visualize the application's structure, user flow, and navigation before moving to the final user interface design. The wireframes were created using Figma and follow the design thinking process to ensure a user-centered approach.

User Research

PROBLEM STATEMENT

Many college students and working professionals find it difficult to manage their daily expenses. They often forget where they spend money, making budgeting and saving difficult.

TARGET USERS

- College Students
- Young Professionals
- Individuals managing personal finances

USER NEEDS

- Quick expense entry
- View current balance
- Organize expenses by category
- Monthly spending reports
- Easy and simple interface

RESEARCH SUMMARY

The research shows that users prefer an application that allows them to record expenses quickly while providing clear insights into their spending habits. Simplicity and ease of

use are the most important factors.

User Persona

RAHUL KUMAR

Age: 20 Years

Occupation: B.Tech Student

GOALS

- Track daily expenses
- Save money every month
- Monitor spending habits

PAIN POINTS

- Forgets daily expenses
- Cannot identify unnecessary spending
- Existing expense tracking apps are too complex

MOTIVATION

Rahul wants an easy-to-use application that helps him keep track of his expenses and improve his financial planning.

User Flow

Wireframe 1 – Login Screen

Purpose

Allows users to securely log in or create a new account.

COMPONENTS

- Application Title
- Email Field
- Password Field
- Login Button
- Create Account Button

Insert Screenshot of Login Wireframe Here

Wireframe 2 – Dashboard

Purpose

Displays the user's financial summary and recent expenses.

COMPONENTS

- Welcome Message
- Current Balance
- Recent Expenses List
- Add Expense Button
- Bottom Navigation Menu

Insert Screenshot of Dashboard Wireframe Here

Wireframe 3 – Add Expense

Purpose

Allows users to add a new expense.

COMPONENTS

- Amount Field
- Category Dropdown
- Date Selection
- Notes Field
- Save Expense Button

Insert Screenshot of Add Expense Wireframe Here

Wireframe 4 – Reports

Purpose

Provides a summary of monthly expenses.

COMPONENTS

- Monthly Report
- Total Expenses
- Pie Chart Placeholder
- Category-wise Expense Breakdown
- View Detailed Report

Insert Screenshot of Reports Wireframe Here

Design Thinking Process

EMPATHIZE

Users often forget to record daily expenses and require an easy way to manage their finances.

DEFINE

The main challenge is helping users organize and monitor their expenses with minimal effort.

IDEATE

Design a mobile application that allows users to add expenses quickly, categorize them, and generate monthly reports through a simple interface.

PROTOTYPE

Created four low-fidelity wireframes in Figma representing the Login, Dashboard, Add Expense, and Reports screens.

TEST

The prototype can be tested with users to gather feedback about navigation, usability, and overall user experience. The feedback can then be used to improve the final application.

Expected Outcome

The project demonstrates the early planning stage of mobile application development. By completing user research, defining user personas, designing user flows, and creating

wireframes, the application layout becomes clear before development begins.

Conclusion

The Expense Tracker wireframes provide a simple and organized blueprint for the mobile application. Following the design thinking process helped create a user-focused solution that addresses common challenges in personal expense management. These wireframes serve as the foundation for developing a complete and user-friendly mobile application.
